

# PROJECT PROFILE

## Lehigh Valley Baptist Church

Keystone Consulting Engineers, Inc. prepared the Land Development plans for this parking lot expansion and renovation project that completely transformed the appearance and functionality of the Church parking facilities. As a part of that process, KCE also prepared a master campus plan to serve as a "roadmap" to help guide the Church in future campus development decisions. In addition to designing the parking lot layout, grading, and stormwater facilities, KCE worked closely with Church staff and the sitework contractor to ensure that the project was constructed in a cost-effective manner while still maintain high quality standards.
